

SIMATS ENGINEERING (SAVEETHA SCHOOL OF ENGINEERING)
Department of Computer Science and Engineering
ASSESSMENT TOOL 1 – Prompt Engineering Challenge

Course Code:	CSA65	Course Title:	Generative AI and Large Language Models
CO Assessed:	CO2 – Precision (BL1, BL2)	Assessment:	Assessment Tool 3 – Prompt Engineering Challenge
Weightage:	40% of CIA	Total Marks:	100 (2 Question)
CO1 Statement:	<i>Apply prompt engineering techniques and utilize pre-trained Large Language Models through modern AI frameworks and APIs to solve real-world problems.(BL1, BL2)</i>		
Student Name:	C.Praveen Kumar	Reg. No.:	192472034
Section / Batch:	2024	Date:	29-07-2026

Code of Conduct

I C.Praveen Kumar (Name / Reg No) certify that this submission is my original work and that I have adhered to the guidelines specified for this assessment. I understand that any violation of academic integrity rules will result in disciplinary action.

Signature of the Student: _____

SECTION A – PROMPT ENGINEERING CHALLENGE

1.Few-Shot Classification

Write a few-shot prompt (using 3 examples) that classifies customer reviews as Positive, Negative, or Neutral. Show your 3 examples and the final prompt.

Aim: To Write a few-shot prompt (using 3 examples) that classifies customer reviews as Positive, Negative, or Neutral.

Definition: Few-shot prompting is a prompting technique in which the AI is provided with a few labeled examples before asking it to perform a similar

task. The examples help the model understand the expected format and classification.

Example 1

Customer Review:

"The laptop arrived earlier than expected, and its performance is excellent."

Classification: Positive

Example 2

Customer Review:

"The package was delivered late, and the product stopped working after two days."

Classification: Negative

Example 3

Customer Review:

"The product is average. It works as described, but there are no special features."

Classification: Neutral

Final Few-Shot Prompt:

You are an expert sentiment analysis AI.

Your task is to classify each customer review into exactly one of the following categories:

- Positive
- Negative
- Neutral

Rules:

- Positive: The review expresses overall satisfaction or praise.
- Negative: The review expresses dissatisfaction, complaints, or disappointment.
- Neutral: The review contains both positive and negative opinions, or is factual without a strong opinion.

Use the following examples as a guide.

Example 1

Review: "The laptop arrived earlier than expected, and its performance is excellent."

Sentiment: Positive

Example 2

Review: "The package was delivered late, and the product stopped working after two days."

Sentiment: Negative

Example 3

Review: "The product is average. It works as described, but there are no special features."

Sentiment: Neutral

Now classify this review.

Review: "The delivery was quick, but the product quality could have been better."

Respond in the following format only:

Sentiment: <Positive/Negative/Neutral>

Reason: <One sentence explaining your classification.>

OUTPUT:

Conclusion:

This is a **Few-Shot Prompt** because it provides **three labeled examples** (Positive, Negative, and Neutral) before asking the AI to classify a new customer review. These examples guide the model to produce an accurate sentiment classification.

2.Role/Persona Prompt

Write a system prompt that turns the model into a "Socratic tutor" — one that never gives direct answers, only guiding questions, for a student asking about photosynthesis.

AIM: To Write a system prompt that turns the model into a "Socratic tutor" — one that never gives direct answers, only guiding questions, for a student asking about photosynthesis.

Definition: Write a system prompt that turns the model into a "Socratic tutor" — one that never gives direct answers, only guiding questions, for a student asking about photosynthesis.

Final Prompt:

You are a Socratic tutor specializing in Biology. Your role is to help students understand the concept of photosynthesis through guided questioning instead of giving direct answers.

Instructions:

- Never provide the final answer directly.
- Ask one guiding question at a time.
- Encourage the student to think and explain their reasoning.
- If the student's answer is incorrect, ask another guiding question instead of correcting them immediately.
- Give hints only if the student is unable to proceed.
- Use simple and encouraging language suitable for school students.
- Keep the discussion focused on photosynthesis and help the student discover the answer independently.

OUTPUT:

Conclusion:

This is a Role/Persona Prompt because it assigns the AI the role of a Socratic tutor. Instead of providing direct answers, the AI guides the student through thoughtful questions, encouraging critical thinking and self-learning about photosynthesis.
